

Merrion Fertility Clinic

Your Guide to Our Services

Cutting-edge fertility care,
guided by honesty and integrity

Evidence-based fertility treatment, tailored to each patient.

Expert Fertility Care

Merrion Fertility Clinic (MFC) provides comprehensive, evidence-based fertility investigation and treatment, and is Ireland's only not-for-profit fertility clinic.

With more than 25 years' experience in reproductive medicine, our multidisciplinary team includes Consultant Obstetricians & Gynaecologists, fertility specialists, nurses, embryologists and patient coordinators, working together to provide individualised care for every patient.

Connection with Holles Street, National Maternity Hospital

MFC was originally founded by doctors from the National Maternity Hospital (NMH) and retains a close clinical and strategic relationship with the hospital.

Many of our fertility specialists also work as Consultant Obstetricians & Gynaecologists at the NMH, and Consultant Anaesthetists from the NMH provide sedation for our egg collection procedures. This longstanding association supports continuity of care from fertility investigation and treatment through to pregnancy and obstetric care where appropriate.

An Approved Provider of HSE-Funded Fertility Treatment

Merrion Fertility Clinic is an HSE-approved provider of publicly funded fertility treatment, providing funded IUI, IVF and ICSI treatment to eligible patients referred through the HSE fertility service.

The GP is the starting point for the publicly funded pathway. Patients who may meet the eligibility criteria should be referred by their GP to the appropriate regional fertility hub.

Following assessment, where assisted fertility treatment is recommended, eligible patients can choose from the HSE-approved providers. Patients who choose Merrion Fertility Clinic are then referred directly to our team for treatment.

HSE-funded patients at MFC receive the same standard of clinical care as our private patients, with treatment delivered by our multidisciplinary fertility team.

Comprehensive Fertility Services

We provide investigation and treatment across the full spectrum of fertility care, including fertility assessment and investigation, ovulation induction and cycle monitoring, intrauterine insemination (IUI), IVF and ICSI, frozen embryo transfer (FET), egg freezing, sperm freezing, semen analysis and male fertility assessment, surgical sperm retrieval, including specialist microTESE pathways, donor services, reciprocal IVF, preimplantation genetic testing (PGT-A, PGT-M, PGT-SR), reproductive surgery, laparoscopic egg collections and the adolescent cancer fertility project (in conjunction with the Irish Cancer Society).

Dublin & Galway

Our main clinic is located at 60 Lower Mount Street, Dublin 2, adjacent to Merrion Square and next door to the National Maternity Hospital. Our Galway satellite clinic provides greater access to MFC services for patients living in Galway and the West of Ireland. Patients can attend Galway for fertility investigations, ultrasound scans and other appointments, reducing the need to travel to Dublin throughout their fertility journey.

Referring Your Patients

Patients can self-refer to Merrion Fertility Clinic for a private fertility consultation and do not require a GP referral to see one of our fertility doctors. A GP or Consultant referral is required for patients attending specifically for semen analysis. For publicly funded fertility treatment, the patient's GP should refer them to the appropriate HSE regional fertility hub in accordance with the national fertility pathway.

Meet Our Team

We have a highly experienced team of doctors, fertility nurses and midwives, embryologists, and patient support staff.
